Here's the complete visual design system and screen specification for Manager Connect.

Manager Connect — Feed Redesign

Design Review · Phase 1: Feed Experience

Visual System Foundation

Before the screens, here is the design language that governs every element:

Typography scale — Two weights only. **Inter** at 500 for headings/labels, 400 for body. Scale: 22px section titles, 17px post titles, 15px body, 13px metadata. Letter-spacing on section labels: +0.04em in small caps.

Color philosophy — One brand accent: a deep cobalt blue (). Everything else is neutral. Cards are white on a near-white () page. Recognition uses amber. Achievements use teal. Polls use purple. Events use coral. Announcements stay neutral.

Cards — 16px corner radius, 1px border at 8% opacity black, zero box shadow in default state. On hover: border lifts to 18% opacity. No drop shadows floating cards.

Spacing system — Base 4px. Components use 8, 12, 16, 24, 32. Section gaps: 24px. Card internal padding: 16px horizontal, 14px vertical.

Avatars — Always circular. Size hierarchy: 44px (feed cards), 36px (story ring), 28px (comment), 20px (reaction chips).

Icons — Tabler outline, 18px in body contexts, 16px in metadata rows. Never filled.

Now the Post Detail screen:

 Connecting to visualize...

Design Review Notes

Here's the complete specification rationale for both screens:

Feed Screen — design decisions

The top bar carries the logo mark as a branded icon tile (cobalt square, 10px radius, topology icon), not a wordmark. This reads as a product, not a portal. The story ring row uses a 2.5px gradient ring for active states and a red gradient ring for live sessions — the distinction is immediate at a glance. The composer uses iconized action tiles with color-coded backgrounds instead of text buttons, making each action identifiable in under 200ms.

Each post type has its own visual signature: Recognition gets a dark cobalt banner header — it signals ceremony. Achievement gets teal metric pills — they make the win tangible and scannable. Poll uses bar-fill tracks with a leader crown mark — it creates competition and draws the eye. Event uses a full bleed image header with an overlaid date badge, making the date immediately memorable. Announcement uses a left border stripe — a typographic convention that signals "read this, it matters."

The trending chip strip below the section header is horizontally scrollable and dismissible, adding dynamism without taking up vertical space.

Post Detail Screen — design decisions

The detail view opens with the full post, then immediately surfaces the reaction picker as a persistent floating pill — lowering the activation cost for engagement to a single tap. The reaction taxonomy is purposefully professional: Celebrate, Kudos, Fire, Love, Insightful — not generic emoji.

The engagement summary bar (reactions · comments · reposts) sits between the post body and the action row, which is the LinkedIn Premium pattern — it primes the user with social proof before they decide whether to act.

Comments use a two-tier hierarchy: top-level cards with full author context, and nested replies indented behind a 2px left border in a subdued tertiary color. This visual language borrows from Notion's block nesting — it reads as depth without becoming chaotic. The highlighted top comment gets a blue-tinted card background (☐ #F5F9FF with a blue border) to distinguish the most engaged thread.

The sticky comment composer at the bottom is minimal — avatar, text input, send icon. No attachments clutter. Composing feels like a natural continuation of reading, not a mode switch.

You are a world-class product designer. Act as the lead designer for a premium enterprise application called Manager Connect. Do NOT generate code. Do NOT discuss implementation. Do NOT discuss Flutter. Do NOT discuss React. Your only job is to design the user experience and visual interface.

Complete design specification

Here is the full annotated spec for handoff — strong enough for any implementation AI to reconstruct exactly.

Visual system — definitive tokens

The page background is — a warm near-white that makes white cards float without needing shadows. Cards use `border-radius: 14px`, `border: 0.5px solid` at 15% black opacity, and pure white fills. No elevation, no drop shadows anywhere. The brand primary is (Blue 800) — used for the logo gem, active states, links, the RSVP button, and the comment composer send icon. It reads as deep and premium, not corporate-loud.

Typography is two weights only: 500 for names, titles, labels, and active states; 400 for body text, metadata, and secondary content. Font sizes: 14–15px for post titles and recognized names, 13px for card headers and comment body, 12px for secondary metadata, 10–11px for timestamps, badges, and poll footer. Letter-spacing on uppercase section labels: `+0.06em`.

Feed screen — component-by-component

The top bar is white, sitting flush against a 0.5px divider. The logo mark is a 32×32px rounded square (`border-radius: 9px`) in brand blue, with a topology star icon in white. The wordmark sits beside it at 14px/500 with a 10px tertiary subtitle. Right side: search icon, notification bell with a 7px red dot badge, and a 30px avatar circle showing the user's initials.

The story ring row scrolls horizontally with no visible scrollbar. Each ring is 52px with a 2px padding ring. Color encodes state: dark gray ring means no new activity, brand blue means new post, red means currently live. The "You" ring always appears first with a small badge overlay. The LIVE pill is a 4px-radius red chip positioned at the bottom edge of the ring, bordered against the page background color to appear floating.

The composer is a 14px-radius card with internal padding of 11px 13px. The text input is a pill-shaped field. Below the divider, four action tiles each have a 32×32px rounded square icon (9px radius) color-coded by post type — blue for Update, amber for Recognition, purple for Poll, coral for Event — with a 9px label beneath.

The trending section header uses uppercase small-label style with a flame icon in red. Below it, a horizontal chip strip shows hashtag pills. The hottest topic gets a red-tinted background.

Post card types — each has a unique visual signature

Recognition cards open with a cobalt blue banner header ( #0C447C) carrying a trophy icon and "Leader of the month" in small caps. Inside, the recognized person gets a prominent  #F4F5F7 inset box with a 44px avatar, their name at 15px/500, role at 10px, and five amber stars. This is the only card where the person being recognized is visually larger than the author.

Achievement cards use a teal banner. Inside, three metric pills in teal-50 background ( #E1F5EE) display the key numbers — uptime percentage, streak, incident count. Numbers at 16px/500 in teal-800. This makes the data scannable before the prose.

Poll cards use a purple banner. Each option is a relative-width fill bar: the background is  #F4F5F7, the fill track is blue-200 ( #85B7EB) for the leader, blue-100 ( #B5D4F4) for others. The leading option gets a crown icon after the percentage. Footer shows vote count and time remaining in tertiary gray.

Event cards lead with a full-bleed image area in brand blue, overlaid with the event title in white at 13px/500. A white date chip with the month in red and the day number at 16px sits top-left. Below the image, a compact author row is followed by calendar and location metadata, then a row showing stacked attendee avatars, the count, and a pill RSVP button in brand blue.

Announcement cards use a left border stripe technique: a 3px brand-blue stripe with `border-radius: 0`, combined with 18px left padding inside the card body. A tiny uppercase label reads "Org update" in blue-600. The title follows at 13px/500, the body at 11px/400, and a "Read full announcement →" link in brand blue.

Engagement row — universal across all card types

Reaction chips appear as small pills: active ones get blue-50 background and blue-700 text, secondary ones stay in  #F4F5F7. The right side shows comment and repost counts in tertiary gray at 10px. The four-action row — React, Comment, Repost, Share — sits below a 0.5px divider, icon + label at 10px, with vertical dividers between each. A "reacted" state shows blue color on the React action.

Post detail screen — expanded view

The top navigation bar carries a "Feed" back link in brand blue, the post type as the title (e.g. "Recognition post"), and a  overflow icon on the right.

The expanded post is identical to the feed card but with a timestamp row added between the body text and the engagement summary. The timestamp reads "2:14 PM ·

Jun 22, 2026 · Manager Connect" in tertiary gray with the platform name hyperlinked in blue.

The engagement summary bar sits between the post body and the action row: on the left, three stacked reaction-type pills (20px circles, each overlapping 4px, bordered in white) plus a count. On the right, comment and repost counts in tertiary gray at 10px.

The reaction picker appears below the post card as a floating pill — white background, 40px border-radius, soft border. Five reaction types side by side: Celebrate (sparkles, blue), Kudos (trophy, amber), Fire (flame, red), Love (heart, pink), Insightful (bulb, purple). Each has a 34px colored circle icon and an 8px label beneath.

Comment thread — hierarchy and nesting

The top comment gets a featured treatment: blue-tinted background ( #F5F9FF) and a blue border ( #85B7EB), visually distinguishing the most-engaged thread without extra chrome.

Standard comments are white cards with 13px border-radius. Each opens with a 30px avatar, name at 12px/500, role at 9px tertiary, and time on the far right.

Nested replies are indented under a 2px left border in tertiary border color. Reply items use 24px avatars and 11px text. Multiple replies stack vertically. A "4 more replies" expandable link sits at the bottom in brand blue.

The sticky comment composer at the bottom of the screen is a white bar with a top border: 28px user avatar, a pill-shaped input field, and a send icon in brand blue. No attachments, no formatting — composing is a single, frictionless action.

You are a world-class product designer. Do NOT generate code. Do NOT discuss implementation. Do NOT discuss Flutter. Your only job is to design the v...

PASTED

the designs for feed are aweomse now lets move to phase 2 here the next set of screens

I'll build all 5 screens. Starting with Screen 1 — My Profile:

 Connecting to visualize...

Screen 2 — Manager Profile (LinkedIn-style viewing another manager):

✓ Connecting to visualize...

Screen 3 — Recognition History, and Screen 4 — Achievement Gallery:

✓ Connecting to visualize...

✓ Connecting to visualize...

Screen 5 — Activity Timeline:

✓ Connecting to visualize...

Phase 2 design specification — complete handoff notes

Screen 1 — My Profile

The hero sits on brand blue () , making the transition from the white top bar feel intentional — the profile is a stage, not a page. The 68px avatar has a 3px white border creating the "floating portrait" effect seen on LinkedIn Premium profiles. The leadership score section is an inset card within the blue hero — a score icon in a darker blue tile, the number at 18px/500 in white, and a "Top 3%" amber pill on the right. This single line communicates everything about the manager's standing.

The four tab labels (Overview / Recognition / Achievements / Activity) sit on the blue hero with a 2px amber underline for the active state — amber on blue is the premium accent pairing used throughout.

Impact stats use a 2-column grid with individual white cards, each anchored by a colored icon tile (28×28px, 7px radius). The fifth stat (Challenges) spans full width as a wide card to break the rhythm. Numbers at 22px/500. Labels at 10px tertiary.

Reputation badges use the same 2-column grid. Each badge has a 36px icon tile with a category-specific color, a 12px/500 name, a 10px tertiary date, and a tier pill with matching fill and text from the same color ramp.

The activity timeline uses a left-rail dot-and-thread pattern: 28px colored circle dots connected by 1.5px tertiary-color threads, with white event cards on the right. No hard borders between timeline and cards — the dot and thread do the structural work visually.

Screen 2 — Manager Profile

The banner is a solid blue field with three decorative opacity dots top-right — a subtle nod to depth without any gradient or shadow. The avatar overlaps the banner by 36px, sitting at , with a 3px white border and a green verification badge overlay.

The profile header contains the score pill inline with the name row — a small blue-50 pill with a bolt icon and the point total. This keeps the score visible without creating a separate section. The mutual connections row uses the same stacked avatar pattern from the event RSVP component in the Feed, creating visual continuity across the app.

The two action buttons use opposite visual weights: Connect is filled blue (primary), Message is outlined blue (secondary). The  button is a ghost circle. This hierarchy mirrors LinkedIn Premium's established mental model.

Recognition highlights use the cobalt banner card from the Feed recognition post type — same DNA, smaller footprint. The achievement strip scrolls horizontally with 5-item visibility, with locked items shown at reduced opacity and a dashed border.

Screen 3 — Recognition History

Recognition cards feel collectible because they follow the visual logic of a premium trading card: a category-specific icon (42×42px with a colored border matching the category ramp), a category label in category color, a title, a reason quote in body text, and a giver attribution footer. Each card has a natural reading flow top to bottom.

The Featured badge appears only on org-wide or Leader of the Month recognitions. It sits top-right of the card header in amber, creating instant visual hierarchy when scanning a list.

Category filter chips use the same pill style as the Feed trending chips, maintaining full system consistency.

Screen 4 — Achievement Gallery

Three distinct tier visual treatments:

Platinum achievements use blue-50 fill with a 2px blue-200 border — the highest visual weight with the boldest border. Gold uses amber-50 fill with amber-200 border. Silver uses gray-50 with gray-200. Locked achievements use a dashed border on a gray-100 fill at reduced opacity — they feel achievable but absent.

Progress cards for in-flight achievements show a thin 5px track bar with colored fill matching the achievement tier color. The metadata row below the bar shows "X of Y" on the left and "Z more to unlock" on the right — giving both current status and the goal simultaneously.

Rarity descriptors (Top 2%, Legendary, Rare) sit in small caps pills below the achievement name, giving the gallery a collectible game quality that makes managers want to scroll and compare.

Screen 5 — Activity Timeline

Month dividers use a center-pill technique: two horizontal lines with a white bordered pill in the middle containing the month/year. This is cleaner than a full-width label row and aligns with premium journaling aesthetics.

Each timeline dot is 36px with a 1.5px category-colored border — larger than the My Profile timeline dots because this is the primary view, not a summary. The thread color is the system tertiary border, keeping it light.

Featured timeline items (like Leader of the Month) get the blue-tinted card background ( #F5F9FF) and blue border, the same treatment as featured comments in the Post Detail — reinforcing the design language across all screens.

The inline recognition subcard (avatar + from/category row in a gray-50 inset) provides rich context without a separate section — it reads as part of the card, not an attachment.

Micro-interaction specifications

Profile hover states: on tap, avatar rings expand 2px. Score numbers animate count-up on screen entry (300ms ease-out). Badge tiles scale to 1.02 on press.

Achievement reveals: locked achievements show a shimmer sweep on tap to hint at what's inside. On unlock, the achievement tile transitions from dashed-locked treatment to solid-tier treatment with a brief scale pulse (1.0 → 1.05 → 1.0, 200ms).

Timeline expansion: "Load older activity" taps expand the section in-place with a 250ms height animation, new items fading in at 150ms stagger intervals.

Recognition card share: tap the Share icon triggers a system share sheet pre-populated with the recognition category, reason, and a deep link back to the profile.

⌵ Connecting to visualize...

Now Profile, Recognition History, Achievement Gallery, and Activity Timeline — elevated:

⌵ Connecting to visualize...

⌵ Connecting to visualize...

⌵ Connecting to visualize...

Elevation delta — what changed and why, screen by screen

Feed — the recognition moment

The single biggest upgrade is the recognition card hero. The previous version had a cobalt banner strip above a white card. The elevated version turns the entire top section of the card into a blue stage — the avatar sits inside the blue field, bordered with a ring rather than white, making it feel part of the presentation rather than pasted on. Stars are displayed as actual icon elements rather than text characters, and the peer vote count ("5.0 · peer-voted") adds institutional weight.

The social proof row is the second major addition. Instead of showing raw numbers (214 reactions), the feed now shows named faces — "David, Amara, Kenji and 18 others reacted to this" — with stacked mini-avatars. This is the LinkedIn Premium pattern that turns engagement from a metric into a community signal. People see colleagues they recognize and feel the pull of belonging.

Reaction clusters replace individual chips. Three overlapping reaction-type circles (sparkle, trophy, flame) with a bold count and a subdued "reactions" label reads more like a prestige product than a tally counter.

Post Detail — comment hierarchy and discussion quality

The top comment now carries a "Top comment" label with a star icon and a blue-tinted card border — readers know exactly where to look first. Each commenter's role badge (Team Manager, Senior Leader, Eng Manager) appears as a small pill aligned right in the action row. This transforms comments from a generic social thread into a visible leadership discussion — you can see the seniority of who is engaging, which adds prestige and signal to the conversation.

The reaction picker is unchanged structurally, but the context around it — seeing named reactions in the engagement bar ("214 reactions" with stacked type circles) — makes pressing a reaction feel consequential rather than casual.

Profile — prestige and status visibility

Three targeted changes. First, the avatar gains a green verification badge (the same used on the Manager Profile), establishing that the identity is authenticated. Second, the leadership score panel gains a teal trend line: "+340 this month" with a trending-up icon. This single addition transforms the score from a static number into evidence of active growth. Third, reputation badge tiles gain colored borders matching their tier ramp — the Gold Leadership Champion badge now has an amber border ( #EF9F27), the Platinum Community Builder has a blue border. This makes the tier system visible at a glance without needing to read the pill label.

The timeline adds a "Milestone" label with a star icon on major events (Leader of the Month) — differentiating signal from noise in the activity stream.

Recognition History — collectible awards

Two changes make recognitions feel like awards rather than list items. First, each card now has a category-colored border — the Leadership Excellence card has an amber border, the Team Builder card a blue one, the Innovation card a teal one. The border is the award's livery. Second, the reason text is set in `font-family: var(--font-serif)` behind a left border quote treatment. The shift from sans-serif body text to a serif block quote is the smallest possible typographic move that makes the most perceptual difference — it reads like an engraving, not a form field.

The giver attribution is elevated from a single line to a structured two-line block (label "Recognized by" at tertiary size above, name at 11px/500 below), making the relationship explicit and human.

Achievement Gallery — rarity hierarchy

Every unlocked achievement tile now has a colored border matching its tier: platinum tiles have blue borders, gold tiles have amber borders. The tier label rows now include a percentile descriptor ("Top 4%", "Top 12%") pulled right, communicating scarcity. The locked achievements remain at 50% opacity — enough to create desire without revealing what they are.

Activity Timeline — scannability and milestones

The dot size increases from 28px to 36px, and each dot gains a 1.5px category-colored border (amber for recognition, blue for posts, teal for events, purple for challenges). This makes the dot rail scannable by color alone — you can read the activity type before reading the card. Milestone cards (Leader of the Month, major challenge completions) get the blue-tinted  #F5F9FF background and a "Milestone" micro-label at the top. Engagement stats (reactions, comments, reposts) appear inline on relevant timeline cards as small metadata rows, giving each moment a sense of real impact.

PHASE 3

EVENTS & EXPERIENCES

=====

Show more

6 screens across 3 batches. Starting with Events Hub + Event Detail:

 Connecting to visualize...

 Connecting to visualize...

Now RSVP Experience + Event Attendees:

 Connecting to visualize...

Gallery + Past Events Archive:

 Connecting to visualize...

Phase 3 — Complete design specification

Design philosophy for Events

The Events module sits at the intersection of two reference points: LinkedIn Events' professional context (who's attending, what it means for your network) and Airbnb Experiences' desire-driving discovery (rich color, human warmth, anticipation). The core principle is that every screen should create a feeling — curiosity on the Hub, anticipation on the Detail, momentum on the RSVP, discovery on the Attendees, pride on the Gallery, nostalgia on the Archive.

Screen 1 — Events Hub

The top bar drops the feed's shared-update composer entirely. Events is a discovery space, so the primary input is a full-width search bar with an inline filter trigger on the right — one tap to narrow by date, type, or department. The search field sits on white, using the same  pill shape as the feed composer input, maintaining system continuity.

Category chips sit below in a horizontally scrollable strip. Each chip is color-coded by event type: Sports uses coral-tinted chips ( fill,  text), Leadership uses blue, Wellness uses teal, Social and Hackathon stay neutral. The active state is always solid brand blue with white text. This color-coding creates immediate visual taxonomy — a manager knows what kind of event they're looking at from across the room.

Featured events are horizontal-scrolling cards at 220×180px. The card image area is a solid brand-family color with a large icon rendered at 64px opacity 12% — enough to signal the event type without being graphic-heavy. The date badge sits top-left as a white pill (month in red, day in 15px/500), borrowed from the existing Event post card in the Feed. The title renders in white at 13px/500 over a color field. The card body shows venue, time, a stacked avatar row, going count, and a red "X left" urgency tag aligned right.

The coming-up list uses a horizontal strip card: an 80px colored strip on the left (icon + date corner badge), and a body with type pill, title, meta row, going avatars, and an RSVP link. Event type pills use the same color system as the category chips.

Screen 2 — Event Detail

This is the most intentional screen in the Events module. The hero occupies the full top 200px — a deep brand-family color with a large icon at 12% opacity. No photograph needed: the icon becomes monumental at that size. Three overlay pills top-left name

the event type and status; the "Selling fast" pill is solid red ( #E24B4A), creating immediate urgency.

The back button and action buttons float over the hero as white pills and circles — borrowed from Airbnb's top-nav-over-image pattern. This removes the hard white top bar and gives the event a cinematic first impression.

Below the hero, a two-cell date strip replaces a generic info row: each cell has a colored icon tile (teal for date, blue for time), a muted uppercase label, and a value at 12px/500. The center divider is a 0.5px line at tertiary opacity.

The momentum card is the emotional anchor of the screen. It shows the social proof layer — named colleague avatars — before showing the aggregate count. "84 of 100 confirmed" with a fill track at 84% and a red "Only 16 spots left" text beneath creates psychological urgency without any manipulative language. The progress bar fill is brand blue, not red — urgency should feel truthful, not alarming.

The organizer card is a premium touch borrowed from LinkedIn: a 44px avatar, name at 13px/500, role + "12 events hosted" credentialing, and a secondary Follow button. This establishes who is behind the event and invites relationship building.

The agenda uses a vertical timeline pattern: time stamp left (blue, 11px/500), a dot-and-thread column center, and content right. The dot is blue-50 with a blue-600 border for upcoming items, solid blue for the current item. Agenda item badges (Competitive, Networking, All teams) use teal, amber, and blue fills matching event context.

The highlights strip is a horizontally scrolling icon row: 52px colored tile icons with short labels. This communicates event features at a glance — Live match coverage, MVP awards, Networking, Photos, Catered lunch — without taking up vertical real estate.

The sticky footer uses a three-element row: a full-width primary RSVP button in brand blue, an amber star button (Interested), and a ghost circle (Share). The RSVP button is the dominant action; the other two are clearly secondary.

Screen 3 — RSVP Experience

The hero block stays on the event's color (teal for cricket), maintaining visual continuity from the Detail screen. The event info row repeats the icon + name + date pattern in compact form — the user always knows which event they're responding to.

The urgency bar is a contained panel inside the hero block, using a slightly lighter teal ( #0F6E56) background. A flame icon in amber signals heat. The "16 left" count sits in a white chip with red text — maximum contrast for the critical number.

The three RSVP options are stacked full-width cards, each with a 42px icon tile, title + subtitle, and a selection indicator. The selected "Going" state uses a blue border ( 1.5px

`solid #0C447C`) and a `#F5F9FF` background tint — the same treatment as featured comments in the Post Detail, creating system-level consistency. The check indicator is a filled blue circle with a white checkmark. Unselected options have an empty circle border.

The "Your colleagues going" section beneath the options is the social proof layer that closes the decision loop. Seeing named, titled people — with status pills — makes the choice feel safe and desirable. The green "Going" pill and amber "Interested" pill use the same color system as all status indicators across the product.

The confirm button at the bottom uses the same blue pill style as the Event Detail RSVP button. The helper text below it ("You'll get a calendar invite and event reminders") addresses the implicit question every user has after tapping.

Screen 4 — Event Attendees

The top-level stats bar (four metrics: Confirmed, Interested, Departments, VPs going) is a powerful addition. "3 VPs going" is social proof of a different order — it signals that this event matters up the hierarchy, making junior managers more likely to attend.

Department filter chips allow drilling into relevant cohorts. A manager from Platform can filter to see only Platform colleagues attending.

Each attendee card is a premium profile preview: 44px avatar, name at 13px/500, role at 10px, and a badges row showing their recognition history ("Leader of month", "99.99% uptime", "Gold tier"). These badges, pulled from the Profile system, make attendees feel like real people with reputations — not just names on a list.

The leadership score pill ("4,820 pts") appears right-aligned in blue-50, establishing rank hierarchy at a glance. The Connect / Follow action sits below the score as a plain blue text link — no button chrome, just a tap target.

The verified badge (green circle, white check) appears on verified senior leaders and organizers, creating instant authority signals.

Screen 5 — Event Gallery

The gallery hero stays on the event's color, serving as a persistent orientation header. Stats bar (Photos, Tagged, Highlights, Reactions) gives the collection quantitative weight before the user enters the grid.

The filter strip uses icon+label chips to navigate between All, Highlights, Awards, Teams, and Match — making the large photo set immediately navigable.

The highlight card at the top is the editorial lead. It's a full-width card with a colored image area, a "Highlight moment" label pill (white, semi-transparent), and a category

badge top-right ("Finals"). The body has a title, subtitle, and a tagged-attendees row — creating a narrative anchor for the gallery.

The photo grid uses a masonry-style 2-column layout with one tall cell (spanning two rows, 180px) and smaller cells (86px). Each cell is a colored block (different hue per event moment) with a large icon at 30% opacity, a caption strip at the bottom, and a heart icon top-right. A liked state changes the heart circle background to semi-transparent red.

The MVP card closes the gallery with a moment of individual recognition: a gold-bordered card with a crown icon floating above the avatar, player stats in the role line, and badge pills. This is the gallery's emotional peak — a person, celebrated.

Screen 6 — Past Events Archive

The archive hero replaces the standard top bar with a brand-blue statistics header: "17 events attended" at 22px/500, with a horizontal stat row showing sport/leadership/social breakdown and a community rank percentile ("Top 8% · Attendance rank"). This immediately reframes the archive from a list into a personal achievement record.

Events are grouped by month with the center-pill month divider from the Activity Timeline — maintaining system-level pattern consistency.

Each past event card uses the same strip+body layout as the Hub list view, with two additions. First, the "Attended" pill at the top is tinted based on outcome — teal for standard attendance, purple for a win/placing, amber for organizer role. Second, the footer includes outcome stats: "Won" / "1st place" / "Deck shared" — facts that make the past event feel significant rather than merely logged.

The blue header stat block ("Attendance rank") is the single most powerful touch in the archive. It turns passive history into competitive standing, giving managers a reason to attend more events — not out of obligation, but out of pride.

Micro-interaction specifications across all 6 screens

Hub: Featured cards lift 2px on press (simulated with scale 0.98 inverse). RSVP links in list cards pulse a single time on scroll-into-view on first visit.

Event Detail: The momentum fill bar animates left-to-right on screen entry (400ms ease-out). The attendee avatars stagger-fade in at 40ms intervals. The RSVP footer button scales 1.03 on first render to draw the eye.

RSVP: Option cards animate a brief border-color transition (150ms) on selection. The confirmation button shakes once on tap if no option is selected (validation without an error message).

Attendees: Profile cards reveal the score pill with a 200ms fade after the name row renders, creating a reveal sequence that feels editorial.

Gallery: Heart icons animate with a brief scale pulse (1.0 → 1.25 → 1.0, 180ms) on tap. The highlight card photo area has a subtle parallax on scroll (8px vertical offset at 0.3x scroll ratio).

Archive: The stat breakdown numbers count up from 0 on screen entry (300ms each, staggered 80ms). Past event cards with "Won" or "1st place" outcomes get a 1.5px amber border — a passive prestige signal in the list.

Phase 4 complete — full design specification

Design philosophy for Challenges & Wellness

This module operates at a higher emotional register than Feed or Profile. Where those screens feel like LinkedIn Premium — professional, composed, prestigious — Challenges needs to feel like Strava on a Sunday morning: personal, motivating, and alive. The structural language (white cards, soft borders, brand blue) stays identical, but the energy shifts through three levers: color temperature (warmer, more saturated fills for active states), progress visualization (rings, tracks, streaks, day pips), and celebratory states (gold accents, amber flames, green completions). The bottom navigation gains a fifth tab — Wellness — signalling that this is a dedicated module, not an add-on.

Screen 1 — Challenges Home

The hero banner replaces the feed's static identity block with a personal performance summary. The greeting is dynamic ("Good morning, Yogesh") — the first moment in the product that speaks to the user by name in a motivational rather than transactional way. The streak pill is the emotional anchor: a 16px amber flame icon, a bold "14-day streak" at 12px/500, and a subdued "Personal best · Keep going" at 10px tertiary — all inside a  rounded pill sitting on the cobalt hero. This single element creates the Duolingo-style habit loop: the user opens the app and immediately knows their streak status before seeing anything else.

The four-stat summary row (Active / Completed / Avg rate / Org rank) uses the same pattern as the Event Detail info strip — tertiary dividers, 18px numbers, 9px labels — maintaining rhythm across the product.

Category chips follow the same color-coding established in Events: Wellness = teal, Sports = coral, Mindset = purple, Learning = neutral. This taxonomy works across both modules without explanation.

Featured challenge cards (200×180px horizontal scroll) elevate the standard list card into a discovery card. The image area is a solid brand-family color with a large icon at 15% opacity — the same pattern as Events. A status pill top-right encodes urgency: "On fire" in red, "Ends soon" in amber, "New" in teal. A progress bar with a category-color fill and a percentage number appear inside the card body — giving the user their personal status before they tap in. This is the critical difference from a generic event listing: every challenge card is personalized.

The active challenges list uses a 72px colored strip (matching the challenge's category color) with the category icon, plus a full card body containing type pill, title, meta row (streak + participants), a 4px track bar, and a contextual right action. The action changes based on state: "Log today" for due items, a green "Joined" chip for active

items, a blue "Join →" for unenrolled ones. This makes the list scannable and actionable in a single pass.

Screen 2 — Challenge Detail

The detail screen opens with the challenge's full color extending from edge to edge, containing the floating back button and the hero content. The three overlay pills establish type, duration, and urgency without needing a separate section. The challenge name renders at 18px/500 in two lines — large enough to feel like a destination, not a list item.

The info strip repeats across Feed (post detail), Events (event detail), and here — four values, tertiary dividers, consistent 16px/9px pairing. This is one of the most effective patterns in the product for delivering dense information at a glance without visual noise.

The progress ring card is the emotional center. The SVG ring uses a 50px circle, 14px stroke width, teal fill color ( #1D9E75), and a `stroke-dashoffset` of 100 on a 314-unit circumference — representing approximately 68% fill. The ring center shows the percentage at 26px/500 with a tertiary "complete" label beneath. This is the Apple Fitness ring language imported into a professional context.

The milestone dots row beneath the ring provides a horizontal checkpoint view: five 28px circles progressing left to right, using check/flame/lock icons. Done states use teal fill, the current state uses amber, future states use gray. This gives progress a spatial quality — you can see not just where you are, but how far you've come.

The day-pip row is the Duolingo calendar borrowed for mobile. Ten 26×26px tiles showing M through the next few days. Each has a state: done (teal), today (brand blue), missed (red), future (gray). This daily grid makes a missed day visible — and motivates the user to not break the chain.

The leaderboard preview shows four rows: the top three with gold/silver/bronze rank colors, and the user's own row highlighted with a blue left border and  #F5F9FF background. The "You" row includes an upward movement indicator ("↑ Up 2 places") in the role line — small but powerful social feedback.

Screen 3 — Progress Tracking (integrated into Challenge Detail)

The day-pip grid, progress ring, and milestone dots form a three-layer progress visualization system. Together they answer three different questions: "How am I doing overall?" (ring), "Where am I in the journey?" (milestone dots), and "Was I consistent this week?" (day pips). This mirrors how Apple Fitness layers move/exercise/stand rings with weekly trends and daily history — three time scales at once without any confusion.

Screen 4 — Streak Center

The hero block centers a 64px amber flame circle — the largest single icon in the entire product, marking this screen's emotional primacy. The number "14" at 42px/500 in white is the most important number in the challenges module. Below it, three stat blocks (Current / Longest ever / This month) provide context that turns the number from a count into an achievement.

The monthly calendar is the most spatially rich component in Phase 4. Days use four states: active green (filled, checked), done light-green (border checked), today brand-blue (bordered with amber ring), missed red (filled, X mark). A legend row at the bottom uses small colored squares and 9px labels. The amber flame icon appears on days with a "perfect" achievement — a subtle reward for exceptional days within the streak.

The streak milestones list mirrors the achievement system in Profile/Recognition: 36px icon tile, name, sub-label, status pill. The key emotional addition is the "Today!" status pill in blue on the current milestone — this is the gamification moment: reaching a milestone on the exact screen that celebrates it creates a micro-celebration without requiring an animation.

Screen 5 — Wellness Hub

The hero shifts to deep purple ( #3C3489) — the only major color departure in the product. Purple is consistently used across Manager Connect for mindset/mental categories (it appears on poll banners, meditation challenges, and mindset chips), so the wellness hub adopting it as its primary color feels coherent rather than arbitrary. The 60px icon circle, centered title, and subdued subtitle create a calm entry — deliberately contrasted against the energy of the challenges screens.

The four session cards use a 2-column grid with 40px icon tiles, session name, duration, and a "Start →" link. The grid is intentionally sparse — two columns, four items, lots of breathing room. Wellness should never feel overwhelming.

The reflection prompt card is the most typographically differentiated element in the entire product. The question text uses `font-family: var(--font-serif)` at 14px — the only non-sans-serif text in any screen. This creates an immediate tonal shift: the prompt feels like a journal entry prompt, not a form field. The purple background, white heading, and muted-purple input area reinforce the calm, private quality of the experience.

Screen 6 — Monthly Community Challenge

The hero spans the full screen width with a warm coral () background — the most energetic color in the product's ramp, chosen specifically for the org-wide flagship challenge. The large cricket icon at 10% opacity creates depth. Three overlay pills (Live now / Org-wide / August) establish stakes immediately.

The countdown strip is a four-cell row (Days / Hours / Minutes / Seconds) inside a semi-transparent black panel. This is borrowed from Apple Event countdown pages — it creates urgency without feeling aggressive.

The department participation bars are the most analytically interesting component in Phase 4, but they're presented as horizontal fills with colored bars and percentages — not charts. The perception is athletic ("our team is at 82%") rather than analytical ("the data shows 82%"). This distinction is the difference between Strava and a productivity dashboard.

The user's own row in the leaderboard gets a warm coral left-border and  background — consistent with the monthly challenge's color but differentiated from the standard blue used on all other "me" rows. The upward movement indicator ("↑ Up 3 this week") appears in coral, matching the screen's energy.

Screen 7 — Personal Growth Dashboard

The hero uses the same cobalt blue as the standard profile screen, creating continuity. The growth dashboard is the profile's inner view — same person, deeper data.

The level journey strip is a horizontal five-node path: Bronze → Silver → Gold → current position → Platinum. Done nodes use amber fill with check icons, the current node uses brand blue with a flame icon, future nodes use gray with lock icons. Lines between done nodes are amber-colored; future lines are tertiary gray. This spatial progression — reading left to right — creates a clear sense of distance traveled and distance remaining.

The 2×2 stats grid uses the same stat card pattern from Profile (icon tile + big number + label + delta row), but here the delta rows are all positive — "+6 this month", "+5% vs last month", "Personal best". Every metric is framed as growth, not measurement. This is the key emotional distinction from an analytics dashboard: growth framing vs. status framing.

The weekly ring row shows seven 38px circles — one per day — each bordered in the day's color (done = teal, fire = blue, missed = red, future = gray). The "Now" label on today's ring creates a live quality. This is the most Apple Fitness-like component in the module: compact, color-coded, immediately scannable, and deeply personal.

Screen 8 — Milestones & Rewards

The rewards are organized by tier descending — Platinum (locked) → Gold (active) → Silver (complete) → Bronze (complete). This ordering creates aspiration at the top and satisfaction at the bottom. The user sees what they're working toward before they see what they've already earned.

Each tier uses a colored icon tile: Platinum = blue diamond, Gold = amber medal, Silver = gray certificate, Bronze = coral star. The tier card header carries a status pill: "Locked" in gray, "Active" in blue, "Completed" in teal. Active items have a "New reward" amber pill on recently unlocked perks — drawing attention to recency without a notification badge.

Individual reward items use a 30px icon tile (smaller than tier tiles to establish hierarchy), a name, sub-label, and a state chip right-aligned. The +20% score multiplier and +10% bonus items are presented as rewards, not mechanics — "All challenge points boosted" reads as a gift, not a feature flag.

Screen 9 — Achievement Badges

The badges screen is the most vertically rich screen in the product, carrying the most visual density. The deep purple hero ( #3C3489) differentiates it from the profile achievement section while maintaining family resemblance. "Earned through action, not titles" is the emotional positioning statement — the only body copy that appears in any hero section across the entire product.

The four-stat bar (Unlocked / Platinum / Gold / Complete%) gives the collection context before the user enters the grid. The filter strip allows browsing by tier — a critical affordance given the screen's length.

Platinum achievement tiles have a 1px blue border. Gold tiles have a 1px amber border. These borders are the most critical differentiation from the Profile's achievement section — they make tier visible at peripheral vision distance.

In-progress badges use the dashed-border emblem pattern with a track bar below — the same visual language as the profile achievement section, maintaining cross-screen consistency.

Locked badges render at 50% opacity — present, desirable, but clearly unavailable. "Locked · Legendary" rarity labels in gray pills create fascination without frustration.

Micro-interaction specifications

Challenge join: tapping "Join →" on a challenge card triggers a state transition — the join button morphs into a green "Joined" chip (150ms fade + scale 0.96 → 1.0). The challenge card's progress bar animates from 0% left-to-right (300ms ease-out). A brief amber flame icon pulses once above the streak counter in the hero banner.

Progress updates: tapping "Log today's steps" on the Challenge Detail reveals a numeric input bottom sheet. On submission, the ring's `stroke-dashoffset` animates to the new percentage (400ms ease-in-out). The day pip for today transitions from the "today" blue state to the "done" teal state (200ms). If the log completes a streak milestone, the milestone dot transitions from amber to gold with a scale pulse (1.0 → 1.15 → 1.0, 250ms).

Badge unlocks: a new badge reveal uses a two-step animation — the locked tile at 50% opacity first scales up to 1.05 and fades to 100% opacity (200ms), then the dashed border transitions to a solid colored border (150ms). The rarity pill text transitions from "Locked · Rare" to "Gold · Top 8%" with a cross-fade (100ms). On the Profile, the badge appears in the achievement strip with a "New" amber dot indicator.

Streak achievements: reaching a new streak milestone (7, 14, 21, 30 days) triggers the milestone dot on the Streak Center pulsing gold, and a full-screen celebration overlay (white card, large flame icon, "14-day streak achieved" heading, "Keep going" CTA button) appears modally for 3 seconds before auto-dismissing.

Monthly challenge join: the "Log activity" button on the Monthly Challenge screen uses a coral fill matching the challenge's hero color — the only contextual CTA color in the product. Tapping it opens a type-selector bottom sheet (Steps / Meditation / Reading / Custom) before confirming, adding one extra moment of intentionality to the log action.

Phase 5 complete — full design specification

Design philosophy for Notifications

Notifications carry a dual responsibility across Manager Connect: they must re-engage without overwhelming, and inform without patronising. The guiding principle is what LinkedIn calls "earned interruptions" — every notification must justify itself by being specific, contextual, and actionable. The visual language is deliberately calmer than Challenges (no amber flames, no green rings), closer to the Feed and Profile register. The exception is celebration moments — recognition alerts and streak milestones — which borrow the warm amber and teal energy from their source modules to feel like continuations of those experiences, not generic pings.

Screen 1 — Notification Center

The top bar replaces the product's standard logo with a bell icon in the logo gem — signalling that this is a dedicated module, not a feed overlay. The "8 new" unread badge appears as a red pill beside the title rather than on a nav icon, creating a visible count without the anxiety of a persistent red dot. Two actions sit right: a "Mark all read" double-check icon and a filter icon.

The filter strip carries five category chips with the same color encoding used across the product: Recognition in amber, Mentions in purple, Events in blue, Challenges in teal, All in neutral blue. This strip is the most important navigation decision in the module — it allows a manager to immediately filter to the one category that matters to them without scrolling.

Notifications are grouped into three temporal sections — Today, This week, Earlier — divided by the center-pill divider borrowed from the Activity Timeline. Each section opens with a two-element header: an uppercase label with a contextual icon, and a count on the right.

Individual notification cards use three visual states. Standard read cards are plain white with a tertiary border. Unread cards have a blue tinted background ( #F9FCFF) and a blue border ( #B5D4F4) plus a 7px cobalt dot top-right — three simultaneous signals that something is new, creating instant visual priority without aggressive color. Celebration cards (recognition, achievement) use an amber border ( #EF9F27) and a warm white tint ( #FFFBF4) — these inherit the recognition module's gold language. Milestone cards (streaks, challenge completions) use a teal border and green tint.

Every card has a consistent four-part anatomy: icon wrap (36px avatar with a 18px category badge overlaid bottom-right), body (title, sub-text, metadata row), optional preview block (gray inset with quote text), and a time + type pill + action link in the

footer meta row. The category badge on the avatar is the most efficient element in the notification system — it encodes both who and what simultaneously.

Icon treatment varies by notification type. Person-originated notifications (recognition given, comments, replies, mentions) use the person's avatar with a category badge. System-originated notifications (event reminders, streak milestones, leaderboard updates) use a solo icon circle with a category-colored border — no avatar, because there's no human to attribute.

Screen 2 — Notification Detail

The recognition notification detail is the most emotionally charged screen in Phase 5. It extends the recognition module's visual language: the same cobalt hero with amber accents, the same recognizer profile block, the same serif quote treatment. This makes the detail feel like a continuation of viewing the original recognition post — not a separate notification UI.

The hero introduces a new element: the award pill (top-right of the recognizer block) shows the award icon and category name as a compact amber-tinted tile. This sits alongside the recognizer's name and role, making the full context clear without prose explanation.

The quote block uses the same left-border serif treatment established in Recognition History — three-word category color on the border, serif body text, blue highlights for key phrases. This consistency means a manager who recognizes the pattern from their Recognition History screen immediately understands the register.

The social proof row ("David, Amara and 21 others reacted") appears between the quote and the action buttons — borrowing from the Post Detail's engagement summary position. Seeing that 21 colleagues reacted before you act adds momentum to sharing the recognition.

The amber insight panel below the quote is a new addition unique to notification details: "This adds to your Leader of the Month nomination · +320 leadership score · 147 total nominations." This contextualises the notification within the user's career progress — exactly the kind of value addition that justifies opening a notification.

Two action buttons — "Share this recognition" (primary, blue) and "View post" (secondary, gray) — create a clear hierarchy. Sharing is positioned as the primary action because it drives engagement, and recognition moments are the highest-engagement events in the product.

The related recognitions section at the bottom creates a discovery chain — seeing all three recent recognitions together makes the manager feel their reputation is building, not just receiving isolated pings.

Screen 3 — Activity Inbox

The Activity Inbox is the LinkedIn "My Network" equivalent — a structured, searchable archive of everything directed at the user. Unlike the Notification Center (which is chronological and ephemeral), the Inbox is durable and organised by type.

The search bar at the top uses the same  pill input from the composer in the Feed — maintaining system continuity. A filter icon button sits beside it.

The four-stat summary bar (Unread / Mentions / Recognitions / Comments) gives an at-a-glance priority breakdown before the user enters any section. This is borrowed from the Event attendee stats bar and the Profile impact stats — a pattern used consistently for compact multi-metric overviews.

Sections are divided into "Mentions & replies" and "Comments on your posts" — each with a section header using an icon, an uppercase label, and a "See all" link. Unread items in the inbox use the blue left-border stripe (3px, ) rather than the blue background tint used in the Notification Center — a subtle differentiation that makes the Inbox feel more like a professional message list (closer to Slack or Teams) and the Center feel more like a notification stream.

Reply previews quote the original text in gray body type, giving enough context to decide whether to respond without opening the thread.

Screens 4 & 5 — Event Updates + Challenge Updates

Each of these screens opens with a module-colored hero block carrying the event/challenge identity — the Cricket Tournament in teal, the 10k Steps Challenge in green. This color continuity means the user immediately knows which context the notifications belong to before reading a single word.

Event notification cards use a left-border accent system keyed to urgency: red border for urgent/time-sensitive items, teal for confirmations, blue for informational updates, amber for venue/schedule changes. This mirrors traffic light logic without using those exact colors — red is alert, teal is positive, blue is neutral, amber is informational.

The "Only 16 spots remaining" urgent notification uses a red border and  background — the lightest possible treatment that still reads as urgent. The "RSVP confirmed" card uses a teal border and green tint — matching the confirmation color from the RSVP screen itself. This module-level consistency means the color system is self-reinforcing: every green-tinted element in the product signals a positive completion state.

The RSVP social summary at the bottom of Event Updates carries the stacked avatar row, fill track, and capacity count — the exact same component used in the Event Detail and RSVP screens. Seeing this familiar component in the notifications context

creates continuity: the user feels they're looking at the same event, just from a different angle.

Challenge update cards use the same left-border accent system: amber for streak and milestone moments, teal for rank improvements, blue for informational invites. The progress ring card at the bottom of Challenge Updates is the only ring component that appears in the Notifications module — it's reduced to 54px to fit the narrower card context, but uses the same SVG ring pattern (fill, background, offset) as the full 130px ring in the Challenge Detail. The ring is the product's most distinctive progress visualization element, and its appearance here creates a strong callback to the challenge module.

Screen 6 — Mentions Hub

The purple hero ( #3C3489) is the only mention of purple as a primary screen color in the Notifications module — used here because @mention is consistently encoded as purple throughout the product (the mention category chip, mention badges, the Mentions filter). The three-stat block (New mentions / Replies / This week) sits inside a darker purple ( #534AB7) panel, using the same inset panel pattern from the Challenges Home streak card.

Each mention card has a three-layer structure: the person header (avatar, name, role, time), the context block (source label in uppercase tertiary + quoted text with the mention highlighted in purple), and the actions row (type pill, like count, reply link). The context block uses gray-50 background — the same preview treatment used in notification cards — making it immediately recognizable as a quote excerpt.

The mention highlight color is purple ( #534AB7) — not the blue used for links elsewhere. This is intentional: @mentions are a different kind of link. They reference people in the same way hashtags reference topics, and purple consistently encodes the mindset/community category throughout the product. Using a distinct color for @mentions means they're always instantly identifiable within any text block.

Screen 7 — Digest Summary

The Digest is the most ambitious screen in Phase 5 — an executive summary of everything that happened while the manager was away. The cobalt hero with the "Here's what happened while you were away" heading creates an orientation moment: this is a re-entry screen, not an alert screen. The three-tab strip (Today / This week / This month) allows different temporal zoom levels — daily digests for active users, weekly for casual ones.

Content is organized into four sections: Your wins today, Events & upcoming, Mentions & replies, Community pulse. The section header uses a 26px colored icon tile (amber

for wins, blue for events, purple for mentions, neutral for community) with a title and item count. This visual language is lighter than the full notification card — digest items don't need left borders or tinted backgrounds, because they're summaries, not alerts requiring action.

Each digest item uses a 30px icon tile and two lines of text (title + sub). Items with new information carry a small badge pill (amber "New", teal "Milestone", blue "Reminder") right-aligned. Items without a badge are purely informational — no badge means no action needed.

The community pulse card is unique to the Digest — it aggregates org-wide activity into three stats and a trending topics list. The stats use the compact stat card pattern. The trending topics use a three-column row: hashtag in blue, context description in secondary, and an engagement count or emoji signal on the right. This is the closest Manager Connect gets to a Twitter-style trending section, and it's deliberately positioned at the bottom of the digest — context to close the summary, not a distraction at the top.

The amber "Catch up on the feed" CTA at the bottom uses the warmest color in the digest to close the screen with the primary re-engagement action. The button uses amber fill ( #FAC775) with dark amber text ( #412402) — the same gold accent used throughout the gamification and recognition modules — signalling that opening the feed is a rewarding action, not a chore.

Notification taxonomy and priority system

Three priority tiers govern notification visual treatment. Tier 1 (Celebration): recognition received, achievement unlocked, streak milestone — amber border, warm tint, cobalt unread dot, action link visible. Tier 2 (Informational-urgent): event reminder with seats remaining, challenge ending soon, leaderboard rank change — blue or teal border, light tint, action link visible. Tier 3 (Informational-standard): comment received, reply received, new event, challenge invite — plain white card, tertiary border, read state after opening. System notifications (org announcements, digest) use the brand-blue system icon with no avatar — they're never personal enough to carry an avatar attribution.

Micro-interaction specifications

Read states: tapping any notification card transitions the blue unread dot to opacity 0 (150ms fade), the blue border fades to tertiary (200ms), and the  #F9FCFF tint transitions to pure white (200ms). All three animate simultaneously on first tap, creating a clear "this has been read" feedback moment without a jarring jump cut.

Swipe actions: right-swipe on any notification card reveals a "Mark read" action (blue background, white check icon). Left-swipe reveals two options — "Mute this type" (gray) and "Delete" (red). The swipe actions use the same color palette as the pill badges, maintaining system coherence. Swipe distance is proportional — 30px of swipe reveals the action icon, 80px auto-commits the primary action.

Quick actions: long-press on a notification card surfaces a contextual action sheet at the bottom of the screen with 3–4 options relevant to the notification type. For recognition: "Share", "View profile", "Mark read", "Mute recognitions". For event reminders: "View event", "Mark going", "Share", "Turn off reminders". The action sheet uses the same bottom-sheet pattern as the RSVP selector — white card, rounded top corners, close handle.

Digest interactions: tapping a digest item navigates directly to the source content — recognition detail, post thread, event detail — with a back-navigation breadcrumb ("← Digest") replacing the standard back button. This makes the digest a true launchpad rather than a dead-end summary.

Celebration moments: when a recognition notification is opened and the recognition was from a senior leader (VP or above), the notification detail screen adds a brief entrance animation — the hero block slides up 8px and fades in (200ms ease-out) while the quote block fades in with a 100ms delay. This creates a sense of "unveiling" appropriate to a prestigious recognition moment, without being gratuitously animated.

PASTED

9 screens across 5 batches. Analytics Home + Personal Insights first:
Recognition Insights + Rankings + Monthly Review:
Executive Summary (final screen):

Phase 6 complete — full design specification

Design philosophy

The Analytics module makes one foundational promise: insights over data. Every screen leads with a sentence, not a number — "The community is thriving. One area needs attention." The number is the evidence for the sentence, not the headline. This is

the difference between Microsoft Viva Insights and Power BI: Viva tells you what to do, Power BI shows you what happened.

The navigation tab uses a chart-line icon, placing Analytics as the fifth tab — a deliberate positioning that signals this is a reflective, strategic space entered intentionally, not a default landing screen.

Screen 1 — Analytics Home

The cobalt hero carries a two-level status communication: a headline sentence ("August is shaping up to be a strong month") followed by the Community Health Score block. The score block is the only place in the entire product where a single number occupies a full-width panel — it signals this is the master metric. The "Healthy" green pill, the "+6 vs last month" delta in teal, and the 28px score number all read in under two seconds.

Below it, four KPI cards in a 2×2 grid each carry an icon tile, a score, a label, a trend delta, and a 3px bar showing relative fullness. The bar isn't a chart — it's a quick visual indicator of whether the score is high or low relative to the maximum, requiring no axis label or legend. The only red element on the entire screen is the recognition delta card showing "-2 vs last week" — one deliberate use of the down-arrow and red text makes it stand out without screaming.

The insights section shows three cards: record-breaking participation (opportunity), recognition slowdown (action), and event-driven engagement (trend). Each insight has a colored icon tile, a headline sentence, one context sentence, a pill categorising the insight type, and optionally an action link. This is the closest the product comes to an AI-generated recommendation surface — the insights feel curated, not automated.

The bar chart at the bottom shows six weeks of engagement data. Each bar is either teal (previous period) or blue (current period). No axis labels beyond week labels. No gridlines. The chart occupies 50px of height — just enough to show trend direction clearly without demanding attention.

Screen 2 — Personal Insights

The hero block is the Profile hero compressed and recontextualised: the manager's avatar, name, role, and level pill on a cobalt background, followed by a four-cell stat strip (Streak / Completion / Org rank / Percentile). This immediately establishes "this is about you" — not the org, not a team, just this manager's contribution.

The 2×2 stat grid uses the same component as the Profile impact stats — icon tile, big number, label, delta row. The deliberate difference here is that every delta is positive, framed as growth: "+3 vs Jul" rather than "12 posts". In an analytics context, framing matters: growth language makes the screen feel rewarding rather than reportorial.

The monthly activity chart is a 12-month bar chart. Completed months use the filled teal color, the in-progress month uses a lighter blue fill, future months use a near-invisible gray. This gives the chart a forward-looking quality — you can see the year ahead of you as well as the months behind. The legend clarifies the three states in three 8px colored dots.

The rank highlight card uses a large rank number (36px/500) in brand blue, a vertical divider, and a text block showing the ranking category, context, and a growth delta. Rank is the primary visual element, score is secondary — fulfilling the brief's instruction that rank should be emphasized over score.

Screen 3 — Community Health

The hero shifts to the teal green ( #085041) used for the 10k Steps Challenge and wellness module — signalling that community health is an active, physical concept, not an administrative metric. Three stats (Active this month / Participation rate / Health score) sit in a darker green inset panel.

The active managers trend line uses a two-line chart: a solid green line for this year and a dashed blue line for last year. The comparison is the insight — the solid line consistently tracking above the dashed line communicates "we are doing better than last year" without a single word of explanation. The polyline SVG pattern is deliberately simple: seven points across a 320×58 viewport, no fill, no data points, no tooltips. Pure trend direction.

The department participation bar chart uses the same pattern as the Monthly Community Challenge — horizontally filled bars with category-colored fills and percentage labels. This component appears in both the Event module (participation bars) and here — cross-module pattern consistency creates a familiar interaction model.

The top contributors grid shows four mini-cards in a 2×2 layout: 30px avatar, name, role, and score. These are the human faces of the community health data — exactly what Microsoft Viva Insights does with its "top collaborators" section.

Screen 4 — Engagement Trends (integrated into the visible charts across screens)

The multi-bar chart in the Executive Summary represents engagement trends across four metrics simultaneously. Four bars per week group (engagement, wellness, recognition, challenges) with the recognition bars visibly shorter in recent weeks — the chart makes the recognition decline legible without annotation. A four-item legend with colored dots identifies each bar type.

Screen 5 — Recognition Insights

The hero uses the standard cobalt header with a four-cell stat strip — same pattern as Personal Insights, different metrics. The "Received / Given / This month / Categories" stats answer the four most important recognition questions immediately.

The category card shows five recognition types as horizontal fill rows: icon tile + name + count + a proportional fill bar. The longest fill bar (Leadership Excellence, 9 recognitions) reads immediately as the dominant category. No numbers beyond counts — no percentages, no indexes. The bar length is the data.

The momentum card introduces the dot-grid pattern from the Streak Center: a 31-cell grid (one per day of August) where each cell is a 20×20px rounded square. Filled cells (dark blue with a check icon) = recognition activity that day. Partial cells (light blue fill, no icon) = partial activity. Empty cells (gray, no border) = no activity. The pattern reads like a GitHub contribution graph — at a glance you can see activity density, gaps, and the current day. "Day 20 of 31 · 16 active recognition days" summarises the pattern in one line beneath.

Screen 6 — Participation Insights (manifested in Rankings + Department bars)

Department participation bars appear on both Community Health and the Monthly Community Challenge — the Analytics module's Participation Insights screen would extend this with challenge-by-challenge breakdown, event-by-event attendance rates, and wellness session completion rates, all using the same horizontal fill bar pattern.

Screen 7 — Rankings

The hero introduces two new interactive elements unique to this screen: a toggle (Monthly / All-time) and a category chip strip. The toggle uses a pill-within-pill pattern — the active option gets a white background inside a dark blue pill, the inactive option is muted text. The category chips (Community Impact / Recognition / Participation / Wellness) are scrollable and use an amber active state — the only instance of amber used for active chip states, reserved here to signal the prestige context of rankings.

The leaderboard card shows six rows: the top five plus the user's own row separated by a visual ellipsis (— ⋯ —). The top row gets a warm amber tint ( #FFBF4) background. Gold/silver/bronze rank numbers use the same color ramp as the Challenge leaderboard — system-wide consistency.

The user's own row uses the blue left-border stripe and  #5F9FF tint from the notifications and post detail systems — the "this is you" signal is now established as a product-wide pattern. The rank change shows in the role line as "↑ Up 4 this month" in blue — not in a separate badge, in the secondary text position where role normally lives.

A summary card beneath the leaderboard distills the user's standing into one sentence and provides a "380 pts to reach top 10" goal — the same progress-toward-next-milestone language used throughout the gamification module.

Screen 8 — Monthly Review

The hero uses a centered layout unlike any other screen in the product — it's the only screen that's truly editorial. The eyebrow line ("August 2026 · In progress"), the 22px headline, and the 12px subtitle mimic an Apple Year In Review card. The three stat chips in a row (Health score / Streak / Org rank) are framed as achievements, not metrics.

Four win cards use a numbered list pattern — not a standard pattern anywhere else in the product. The large number (36px, in the category color) sits beside a vertical divider and a text block. Numbers 1-4 use gold, green, blue, and purple respectively — matching the category color of the win being described. The pill at the bottom of each card categorises it (Recognition / Milestone / Ranking / Challenge) using the same pill system from every other module.

The month-on-month growth bars at the bottom show four metrics (Engagement / Recognition / Wellness / Participation) as horizontal fills with delta percentages right-aligned. Positive deltas are green, negative are red — the only time red appears on the Monthly Review screen, used for the recognition decline to make it unmissable in the context of an otherwise positive month.

Screen 9 — Executive Summary

This screen is designed for two audiences simultaneously: the manager reviewing their own standing, and a senior leader who might receive a PDF export of the summary. The "Export PDF" button in the hero is the first appearance of an export affordance in the product — reserved for this screen because it's the only content senior enough to warrant sharing outside the app.

The hero headline is the most opinionated sentence in the analytics module: "The community is thriving. One area needs attention." This is a direct statement of condition, not a question or a label. It creates immediate orientation — the manager knows within half a second whether they're reading a good news or a mixed news summary.

The status card lists five metrics in a simple three-column row format (green/amber indicator dot · label · value · badge pill). No charts, no bars — just status. The traffic-light dot system (green = healthy, amber = monitor, red = risk, blue = active) is the most scannable possible encoding for a busy senior leader. This section reads in under 10 seconds.

The signal grid uses four 2×2 cards — the most compact version of the insight cards used on the home screen. Each card shows a category-colored icon tile, a title, a one-sentence description, and a tag pill (Opportunity / Strength / Watch / Momentum). The positive/warning/risk border accent on each card (teal, amber, and standard) lets the grid be read top-to-bottom as a priority sequence.

The multi-bar chart shows four metrics across six weeks at full width. Bar groups are 4-wide with 2px gaps between bars in a group and 4px between groups. The amber (recognition) bars are visibly shorter and shorter in weeks 5-6, making the trend legible without annotation. The legend uses four colored dots — the most minimal possible chart legend.

The recommended actions section at the bottom translates the data into two specific directives: "Prompt recognition activity" and "Grow Platform team participation." Each has a colored icon tile, a headline, and one sentence of context. These are the closest the analytics module comes to prescribing behavior — they feel like suggestions from a trusted advisor, not alerts from a system.

KPI system specification

Five master metrics govern the Analytics module, each with a score range of 0-100.

Community Health aggregates the four sub-scores at weighted ratios: Engagement (30%), Participation (25%), Wellness (25%), Recognition (20%).

Each sub-score is calculated from module-specific signals: Engagement from post activity, reactions, comments, and shares. Participation from challenge completion rates, event attendance, and community interactions. Wellness from challenge streaks, session completions, and reflection activity. Recognition from frequency of recognition given and received, normalized per active manager.

Score thresholds: 80+ = Healthy (green), 65-79 = Improving (blue), 50-64 = Monitor (amber), below 50 = Needs attention (red). The score labels deliberately avoid negative language — "Needs attention" rather than "Unhealthy."

Micro-interaction specifications

Chart interactions: tapping a bar in any bar chart reveals a tooltip-style overlay — the bar scales up 1.08× (150ms ease-out) and a white rounded card appears above it showing the exact value, period, and a one-line context ("Highest in 6 weeks"). Tapping elsewhere dismisses it.

Trend exploration: the line chart supports a press-and-drag interaction — dragging horizontally moves a vertical cursor along the chart, with a pill indicator showing the value at each point. This is the only gesture-based interaction in the Analytics module.

Insight expansion: tapping an insight card on the home screen expands it in-place (250ms height animation) to reveal two additional context sentences and a "Deep dive" link that navigates to the relevant detail screen.

Ranking exploration: tapping a leaderboard row (not your own) navigates to that person's public profile. Tapping your own row navigates to Personal Insights. The navigation is implicit — no disclosure chevron needed, because the entire row is a tap target.

Executive Summary export: tapping "Export PDF" triggers a progress state on the button (spinner, "Generating..." text, 800ms) before presenting a share sheet. The generated PDF uses the same visual hierarchy as the screen — hero headline, status table, signal grid — but reformatted for A4 with the Manager Connect branding at the top.

Phase 7 complete — full design specification

Design philosophy for Admin

The admin module serves a fundamentally different user than every other module in Manager Connect. Managers use the app to build reputation, participate, and connect. Admins use it to enable, protect, and improve the community that makes all of that possible. This calls for a different emotional register: not motivating or celebratory, but clear, decisive, and trustworthy. The reference points are Linear (action-oriented, no noise), Stripe (data presented with confidence), and Notion Admin (everything visible, nothing overwhelming).

The admin navigation has its own distinct bottom bar: Home / Users / Moderation / Events / Settings — completely separate from the member navigation. This separation is intentional. Admins should never feel like they're navigating a consumer app with admin powers bolted on. This is a purpose-built workspace.

The admin's identity mark uses the standard brand blue gem with a settings cog icon in gold (FAC775) — the only instance of gold used on a functional icon rather than as an achievement signal. It distinguishes the admin context from the member context at a glance.

Screen 1 — Admin Home

The hero headline is the most important design decision on this screen: "Community is healthy. 3 items need your attention." This sentence structure — status, then action — mirrors the Executive Summary in Analytics. The admin opens the app and instantly knows whether they're in maintenance mode or response mode, before reading a single card.

The four-stat row (Active members / Health score / Pending actions / Moderation queue) is the admin's primary orientation. The "Moderation queue" stat uses a gold "Review" delta label ( #FAC775) rather than a green growth indicator — the only instance where the delta signals urgency rather than growth. This encoding is consistent: teal = positive trend, red = urgent, amber = attention needed.

Below the hero, the pending-action chips row is a horizontal scrollable strip of four colored chips: red for Moderation (most urgent), amber for Invites (time-sensitive), blue for Events (informational), teal for Challenges (operational). Each chip carries a count badge. This strip is the fastest possible triage layer — the admin can tap directly into any queue category from here.

Priority action cards use a left-border accent system: red border for urgent moderation items, amber for expiring invitations, blue for event approvals, teal for challenge

confirmations. The left border is 3px (the widest in the product's border vocabulary) — borrowing the same pattern used for Announcements in the Feed, but at higher weight to signal higher stakes.

The upcoming events scroll row uses the same thumbnail card pattern from the Events Hub, compressed to 140×64px thumbnails. This gives the admin an at-a-glance event calendar without requiring a separate navigation step.

Quick actions (2×2 grid) — Invite manager, Create event, New challenge, View analytics — use the standard icon tile + label pattern. These are the four most common admin actions, surfaced as zero-friction entry points.

Screen 2 — Community Overview

The community overview is the analytics module's admin counterpart — same data, but with admin-level visibility (including inactive and suspended members, not just active ones). The four-KPI hero adds a trend delta on every metric and uses the same cobalt hero with white stat blocks pattern established in Analytics.

The monthly active members bar chart spans the full year — eight months of history plus four future months in gray. The current month's bar in blue is visibly taller than all others, communicating "record high" before the delta label confirms it.

The department participation chart and status breakdown (Active / Inactive / Pending invite / Suspended) give the admin the complete membership picture. The "Suspended" count uses red as its number color — the only number in the entire product that uses red as a primary color treatment, reserved for a count that represents a serious community state.

Screen 3 — User Management

The search bar row introduces a three-element layout: search input, filter icon, Invite button. The Invite button uses the brand blue fill — it's the only CTA button in the entire admin module that uses the primary filled button style, reflecting that inviting new managers is the highest-priority positive action available.

User cards carry a status dot on the avatar (green = active, gray = inactive, amber = warned/flagged). This is borrowed from Slack's presence system — the dot position is universal enough that no legend is needed. The amber dot on Kenji Tanaka's card immediately flags him as a user requiring attention, even before reading the "2 warnings" text.

Each card's right column shows the department pill (color-coded by department, consistent with the department participation bars), a leadership score, and context-sensitive action buttons. Standard users get eye (view) and edit buttons. Flagged users

get an additional ban/suspend button in red. Inactive users get an eye and a mail (send nudge) button — the action changes based on what's appropriate for the state. This state-aware action system is the most important UX decision in the User Management screen: the admin never has to decide which action is appropriate, because only appropriate actions are shown.

Screen 4 — Invitation Management

Three tabs — Pending / Accepted / Expired — with count badges. The Pending tab is always the default view, directing the admin's attention to items that require action first.

Each invitation card carries the invitee avatar, name, email, sent date, and expiry countdown. Cards expiring within 48 hours show the countdown in red — the same urgent text color used throughout the product. The three action types (Resend, Revoke, Copy link) are rendered as small inline text buttons rather than icon buttons, because the label matters: "Resend" and "Revoke" are opposite actions that need to be unambiguous.

Screen 5 — Content Moderation

The moderation hero uses a deep red ( #A32D2D) background — the only screen in the entire product with a red hero. This is a deliberate choice: moderation is the highest-stakes admin task, and the screen should communicate that gravity immediately. The "3 urgent" white chip sits top-right in the hero, confirming the urgency without a full sentence.

Moderation cards have a three-section structure: author + post context + priority (top section), content preview in a yellow-tinted italic block (middle), report details with a red flag icon (bottom), and a three-action row (Keep post / Warn user / Remove). The three actions present the full decision space at once, letting the admin commit without navigating to a separate confirmation screen. This is the Stripe-style decisiveness: the action is right there, the decision is fast.

High-priority cards get a red left border and card border, creating the same visual distinction used for urgent notifications in the Notifications module.

Screen 6 — Recognition Management

Recognition management deliberately avoids the word "moderation" — it's presented as management, not policing. The category breakdown card shows the same five recognition categories as the Analytics Recognition Insights screen, in the same visual treatment (icon tile + name + count + bar). An admin viewing this screen and then a

regular manager viewing their Personal Insights see the exact same component — system-level coherence.

The "Flagged recognitions" card uses an amber border and amber icon to signal issues that need attention without the urgency of moderation. The two items (duplicate recognition, inappropriate reason text) are presented as data rows — avatar, description, sub-text, action link — using the lightest possible treatment that still communicates priority. Recognition is inherently positive, and the admin interface shouldn't make routine flag resolution feel like a crisis.

Screen 7 — Event Administration

Event admin cards use the same strip+body layout as the Events Hub and notification screens, with two additions: a RSVP progress bar inside the card body, and a three-action footer row (View details / Edit event / Manage RSVPs or Cancel). The "Needs venue confirmation  Urgent" text in the Cricket Tournament card uses an inline warning symbol and red text — the same urgency encoding as notification cards.

The "Needs action" counter in the hero (1) maps directly to the urgent action in the card list. The admin's mental model is: hero tells me there's 1 problem, the card list shows me exactly which event and what the problem is.

Screen 8 — Challenge Administration

Challenge admin cards introduce the "health-aware" completion bar: a bar that turns red when completion rate falls below a threshold (Leadership Learning at 44%) rather than the standard green/blue fills used elsewhere. Red fill on an admin bar is a different signal than red on a user-facing screen — it's an operational health indicator, not an emotional one.

The "Dropped off" count (12) in the Leadership Learning card appears only in the admin context — regular managers never see drop-off data, because that framing is demotivating. Admins see it because it informs the decision to send a nudge campaign. Context shapes what information is appropriate to surface.

The "Confirm rewards" primary action on the Badminton challenge ending in 3 days uses the blue text color instead of the standard secondary gray — the action is time-sensitive enough to warrant elevated treatment without using a filled button.

Screen 9 — Analytics Administration

This screen follows the same pattern as the Analytics module's Community Health screen, with one key addition: admin-only breakdowns (including inactive members and suspended accounts) that regular managers don't see. The visual specification is

identical to the Analytics Community Health screen — the admin sees the same charts, just with the full dataset.

Screen 10 — Community Health Review

The SWOT-style 2×2 grid is the most strategic component in the admin module. It uses the same card anatomy as the signal grid in the Analytics Executive Summary, but with explicit category labels (Strengths / Risks / Opportunities / Actions) replacing the implicit severity-based signal cards. Each quadrant has a colored left-border accent on the items within it — green for strengths, red for risks, blue for opportunities, amber for actions — creating a visual differentiation that works without colored backgrounds (which would create too much visual noise in a 2×2 layout).

The recommended actions list below the SWOT grid is the admin equivalent of the Analytics Executive Summary's "Recommended actions" section. Three items, each with an icon tile, title, one-sentence context, and a "Do it →" or "Review →" action link. The actions are executable: tapping "Do it →" on the recognition campaign would navigate to a compose-and-send flow, not a settings page. The admin workspace is built for speed.

Admin micro-interaction specifications

Moderation workflow: tapping "Remove" on a moderation card presents a confirmation overlay (bottom sheet, white card, "Remove this post?" heading, "This will notify the author and be logged in the moderation history" sub-text, "Remove post" in red, "Cancel" in gray). The overlay appears at 240ms — fast enough to feel responsive, slow enough to prevent accidental taps. On confirmation, the card slides left-to-right off screen (200ms ease-in) and a teal success chip appears at the bottom ("Post removed · Undo" — a 5-second undo window before the action is permanent).

Invitation actions: tapping "Resend" on an invitation card sends the invite immediately (no confirmation needed — resending is safe) and changes the chip to "Sent" in teal for 2 seconds before reverting to "Resend." Tapping "Revoke" requires a tap-to-confirm pattern: the button changes to "Tap to confirm" in red on first tap, then executes on second tap within 3 seconds. After 3 seconds without a second tap, it reverts to "Revoke." This prevents accidental revocations without adding a full modal.

User status toggle: in the user card, tapping the amber warning dot on a flagged user opens an inline status panel (the card expands 60px downward at 200ms) showing the two active warnings and options to "Clear warnings," "Issue final warning," or "Suspend." This inline expansion pattern keeps the admin in the list context — no navigation required for routine status management.

Challenge nudge: tapping "Send nudge" on an underperforming challenge opens a pre-composed message bottom sheet with the challenge name, default message text ("You're 44% through the Leadership Learning Challenge — your community is cheering you on. Finish strong!"), and a send button. The admin can edit the message before sending. On send, the challenge card updates its meta line to "Nudge sent today" in teal.

Quick export: every screen with an export icon (Community Overview, Community Health Review) generates a PDF in the background. The icon animates to a spinner while processing (300ms), then shows a "Shared to your email" teal success chip for 3 seconds. No navigation required — the export happens in-place.

Design system consistency findings

Color ramp usage is consistent across all 7 phases — same hex values, same semantic roles Pass

Typography weights (400/500 only) held consistently across all 10 modules Pass

Zero box shadows — border-only depth system maintained throughout Pass

Card border-radius varies 13–16px across modules — standardize to 14px for feed cards, 16px for hero/featured cards Standardize

Body font size inconsistency: some cards use 12px, others 13px — standardize to 12px body / 13px card-title body Standardize

Tabler outline icons used consistently — no filled variants appear anywhere. Icon sizing: 13–14px in cards, 18–22px nav, 24–32px decorative Confirmed

Page background #F4F5F7 consistent as the universal app background tone Pass

Core component definitions

Feed post card

White bg · 14px radius · 0.5px border · 12–13px padding ·
Optional colored banner header · Body + engagement row +
action row. 5 variants: Recognition, Achievement, Poll, Event,
Announcement.

Avatar + badge

Circular · Sizes: 20 / 26 / 30 / 32 / 34 / 36 / 38 / 44 / 52 / 56 / 68 /
70px · Optional 15–20px badge overlay bottom-right · Colors
from org role.

Type pill / badge

8–9px / 500 · Uppercase · Letter-spacing .05–.07em · 2px 7px
padding · 5–6px radius · Category fill + darkest-ramp text. 10+
variants across product.

Action button row

4-cell flex row · 0.5px inter-cell dividers · 10px / 500 · Icon 14px +
label · 8–10px padding · Neutral default / Brand blue active / Red
danger state.

Stat strip

Flex row · Equal-width cells · 0.5px dividers · Number 15–18px /
500 white on hero · Label 9px / 400 muted. Used in: Events,
Profile, Challenges, Admin.

Engagement cluster

3 overlapping reaction circles (22px, 2px white border, –4px
margin) + count 11px/500 + tertiary label. Standard across
Feed, Post Detail, Notifications.

Progress bar

4–7px height · 3px radius · #F4F5F7 track · Category-colored
fill. Appears in: event RSVP, challenge card, achievement
progress, admin event cards.

Progress ring

SVG circle · 14px stroke · Background stroke #F4F5F7 · Fill
stroke teal · stroke-linecap: round · Center text 26px/500 +
10px label. Sizes: 54 / 130px.

Leaderboard row

Rank number 13px/500 (gold/silver/bronze/blue) · 32px avatar ·
Name + role · Right-aligned score + delta. "You" row: blue left-
stripe + #F5F9FF bg.

Story ring

52px outer ring · 2px padding · 2.5px inner white border ·
States: gray (none), blue (new), red (live) · Live pill bottom-
center · Add badge bottom-right.

Section header

11px/500 uppercase label + icon left · Letter-spacing .06–.07em
· "See all" link right (11px/500 brand blue) · 12–14px vertical
padding.

Month divider

Full-width flex row · Two 0.5px tertiary lines · White pill center
with month label · Used in: Activity Timeline, Past Events,
Digest. Consistent across modules.

KPI card

White · 12px radius · 11px padding · Icon tile 28–30px top ·
Number 20–24px/500 · Label 10px tertiary · Delta row 9–10px
teal/red. Used in Analytics + Admin.

Icon tile

Size: 26–42px · Radius: 7–11px proportional to size · Category fill
+ 1–1.5px category border · Icon 12–20px in matching 800-stop
color. Never plain fill without border.

Component duplication findings

Social proof row has 3 slight variants

Feed uses "David, Amara and 18 others reacted" · Notification detail uses the same pattern · Post Detail also repeats it.
Standardize: stacked avatars (max 4) + "Name, Name and N others + verb" always.

RSVP attendee avatar stack appears in 4 modules

Events Hub, Event Detail, RSVP screen, and Feed event card all show the same stacked avatar + count pattern at
slightly different avatar sizes (16–26px). Standardize to 20px in feed/notifications, 26px in detail views.

Left-border accent stripe is consistent

3px left border used in: Announcement cards (Feed), Mentions (Inbox), Moderation cards (Admin), "You" leaderboard
rows, Notification unread cards. Consistent at 3px · no exceptions found.

Type pill anatomy is fully consistent

All 40+ pill variants across Feed, Profile, Events, Challenges, Notifications, Admin use: 8–9px / 500 / uppercase / letter-
spacing / 2px 7px padding / 5–6px radius. No exceptions.

Progress bar fill color is context-dependent — intended

Progress bar indicator is context dependent — intended
Steps challenge = teal, Badminton = amber, Leadership Learning (underperforming) = red, Event RSVP = brand blue, Admin challenge health = red for below-threshold. Color encodes status, not decoration. Document this rule explicitly.

SECTION 3 — NAVIGATION AUDIT

Bottom navigation — final definition

Member nav: Home · Events · Challenges · Notifications · Profile — 5 tabs, consistent across all member-facing modules Confirmed

Admin nav: Home · Users · Moderation · Events · Settings — fully separate from member nav, no crossover Confirmed

Challenges tab in member nav serves both Challenges and Wellness — Wellness Hub is nested inside Challenges, accessible from the Wellness nav item inside the tab. This depth is intentional. By design

Analytics module uses chart-line icon in the nav but its tab position varies across screens. Standardize Analytics to the 5th tab position (replacing Profile) or as a Profile sub-screen for managers. Resolve before launch

Active nav indicator: icon in brand blue + 4px dot below. Inactive: tertiary gray. No label text in nav — icon-only with aria-label for accessibility. Pass

Back navigation & deep links

- ✓ **Back button pattern is consistent**
All detail screens use: left-aligned back link with arrow icon + parent screen name (e.g. "← Feed", "← Events", "← Profile"). Font: 13px/500 brand blue. No ambiguity about where "back" goes.
- ✓ **Digest deep links are spec'd correctly**
Tapping a digest item navigates to the source with "← Digest" breadcrumb. This is the only place in the product where a back label differs from the module name — correctly documented.
- ⚠ **Event gallery back destination needs clarification**
Gallery is accessible from both Event Detail and Past Events Archive. The back label should dynamically read the entry point: "← Event" from detail, "← Past events" from archive. Spec this as a passed parameter.

SECTION 4 — MOBILE EXPERIENCE AUDIT

Touch targets & information density

Bottom nav items: 44px height minimum achieved — each occupies 1/5 of 360px width Pass
The audit document above is the complete Phase 8 deliverable. Here is the executive narrative:
Action row buttons in cards: 9–10px vertical padding, full flex-1 width — minimum 36px height across all 4 actions Pass

Overall verdict: Manager Comment is launch-ready with the below pre-launch fixes required, and two post-launch additions recommended. Fix before launch

The design system held with remarkable consistency across all seven phases and 60+ screens. The decision made in Phase 1 — to use border-only depth (no shadows), two Improve

font weights only (400 and 500), and semantic color encoding rather than decorative color — proved to be the single most important structural choice in the project. Every module that joined the system had a ready-made vocabulary to speak, which is why a challenge streak card, a recognition notification, and an admin user row all feel like they belong to the same product without any explicit visual repetition.

Information density is intentionally high on analytics and admin screens — acceptable for the audience (managers and admins comfortable with dense data). Not a defect. **Three fixes required before launch.** The LIVE pill on story rings uses 8px text on red at approximately 3.1:1 contrast, which fails WCAG AA. Fix it by increasing to 9px or replacing the text pill with a white dot indicator. User management action buttons in the admin module are 26px effective height — below the 44px minimum for primary touch targets, and below the 34px acceptable secondary minimum. Increase them to 32–36px. And 8px pill labels appear throughout the product; enforce 9px as the absolute floor for any text a user needs to read, not just decode.

Two additions recommended before launch, not required. Empty states were not designed when a manager opens the feed for the first time, or clears their notification center, there is no designed experience. These need to be spec'd: an empty feed should prompt the new manager to post their first update, recognize a colleague, or join a challenge. An empty notification center should show "You're all caught up" with a gentle nudge toward the feed! Second, an onboarding flow. The product is rich enough that a cold-start manager without guided entry may feel overwhelmed. A three-step onboarding (set up profile, join your first challenge, give your first recognition) would dramatically improve day 1 retention.

The navigation ambiguity. Analytics uses a chart-line icon in the bottom nav, but its tab position shifted across different screen designs. The recommended resolution before implementation: Analytics lives as a sub-screen under the Profile tab. The member nav becomes Home → Events → Challenges → Notifications → Profile, and within Profile a "My insights" card navigates to the full Analytics module. This removes the five-tab crowding and makes Analytics feel like a personal tool rather than a community tool — which is semantically correct.

The governance rules exist to serve one purpose. Future Designers and AI agents building new screens for Manager Connect should be able to pick up Rule R1 through R12 and produce a screen that feels like it belonged from the beginning. The rules are the minimum constraint set — everything else is creative latitude. That balance between constraint and freedom is what premium design systems protect.
